

Baofeng uv-3r audio mod

Author: Dan bloggs

It's a fairly simple mod, As you will see in the [schematic](#) there are two 470ohm resistors one is the power supply for the condenser mic, the other is an attenuator on the mic line before the capacitor, dropping the condenser power supply resistor to 1000hm gives it a little more pep and bridging the other 470 ohm resistor gets rid of the attenuation. Please correct me if I have made a mistake... but I have done this mod to my own Uv-3r and have gained a fair improvement on the audio with no adverse effects.
